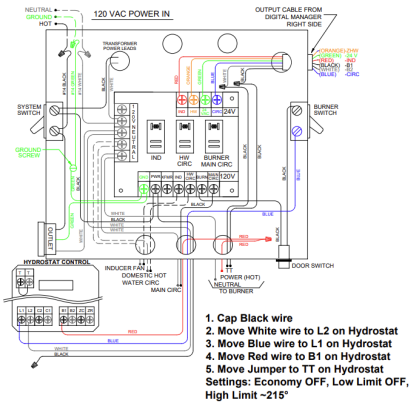
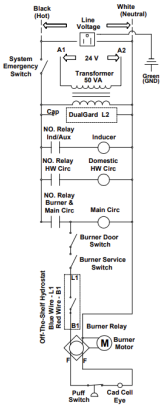
DualGard Substitution to a Conventional Hydrostat

Substituting an OEM part with a part on your service vehicle or on the shelf at a local supply house can be simple with just a few steps.

Most components of Energy Kinetics boilers can be found at your local supply store; however, certain parts are original equipment manufacturer (OEM) items and can only be obtained directly from our factory. In the event of a failure of an OEM part and if a replacement is not available in your inventory, we aim to assist you in restoring the homeowner's system to operational status promptly. To facilitate this, we have developed emergency part substitutions.





The following document details the substitution of a DualGard high limit aquastat with a conventional Hydrostat aquastat, necessitating only minimal adjustments to the wiring.

This change provides a lasting resolution, as there is no need to reinstall a new DualGard to replace the substituted Hydrostat. This installation procedure allows the Hydrostat to maintain the operational integrity of the high limit and low water cutoff safety features found in the DualGard without affecting the overall functionality of the system.

If you have been on the job for 20 minutes and you haven't solved the problem give us a call!
