## Hot Water Tank Temperature Adjustment

## Having trouble aligning your flexline to fit in the airbox?

At Energy Kinetics, we value the feedback from our field technicians and are committed to addressing any concerns quickly. During our seminars, on-site visits, and through our technical support line, we learned that technicians sometimes have difficulty installing flexible oil lines in the burner box frame without modifying the provided openings.

**The solution is straightforward:** Insert the fixed end of the flexible oil line into the box cover rather than the union end. This method ensures that the openings in the box cover align perfectly with the ports on the fuel pump. We have attached a document illustrating this alignment.

Two pipe systems – flex lines align with pump ports. Fish the fixed end through air box, not the union end.
